

Nutritional Supplementation for Cancer Patients

Your doctor will recommend a number of different nutraceuticals that have been clinically researched to be supportive and effective in cancer treatment and care. Examples may include such ingredients as Alpha Lipoic Acid or Reishi Mushroom.

Your Naturopathic Oncology Doctor will ensure these supplements have no contraindications with any chemo or radiotherapy that you maybe undertaking with CancerCare Manitoba. In fact, many of the treatment options that are recommended at Nature Doctors have research to support their concurrent use with conventional medical treatments to improve clinical outcomes.
